

# Finding Your Meter Numbers (MPAN and MPRN)

Last Modified on 12/23/2025 9:19 am EST

Your meter numbers are like your energy supply's home address—they help us identify exactly which meters we'll be supplying. Don't worry, finding them is easier than you might think!

**For electricity (MPAN):** Your MPAN (Meter Point Administration Number) is a 13-digit number that identifies your electricity meter. You can find it:

- On your current electricity bill (usually near the top or in the account details section)
- On the meter itself (though it might be partially hidden)
- By contacting your current supplier

It typically looks like this: 10 12345 67890 123

**For gas (MPRN):** Your MPRN (Meter Point Reference Number) is a 6-10 digit number for your gas supply. Look for it:

- On your gas bill
- On your meter (sometimes displayed digitally)
- From your current gas supplier

It's usually just a string of numbers: 1234567890

**Can't find your numbers?** No problem! If you have a recent energy bill handy, just upload it during the sign-up process and we'll extract the information for you. Alternatively, give us a call and we'll help you track them down together.
